

ABSTRACT OF THE DISCLOSURE

INS
AI

3
4 A system for identifying medical facilities along a travel route preferably includes
5 an input device, a processor, Microsoft SQL server database and a memory storing
6 various information regarding medical facilities. For on-demand determination of
7 medical facilities along a travel route, the input device preferably includes a GPS receiver
8 providing the current geographical coordinates of a patient requiring medical assistance
9 to the processor. The processor compares the geographical coordinates of the patient to
10 coordinates of medical facilities in the database to determine medical facilities near the
11 patient. A user of the system may also input a type of medical emergency, preferred
12 language and insurance information to refine the search for medical facilities. The
13 processor may also calculate a projected travel route using navigational software. The
14 identified medical facilities may be displayed to a user in any manner and/or saved in a
15 navigational computer for reference in case of a medical emergency.
